ICPSR Processing Note

1. For reasons of confidentiality, variables COLL_ID, STUDY_ID, and SERIAL are restricted from general dissemination. To obtain these variables, researchers must agree to the terms and conditions of a Restricted Data Use Agreement in accordance with existing ICPSR servicing policies. The cases in the public-use file were rearranged in random order. COLL_ID and SERIAL were recoded to missing and STUDY_ID was recoded to each case's ordinal number in the public-use file.

2. The principal investigator's staff provided this note concerning the analytic samples of the Harvard School of Public Health College Alcohol Study:

"Each year of the national survey, we resurveyed the same schools that participated in the last survey. With each new survey, a few schools drop out of the survey, and of those that remain, we keep only those schools that have high enough response rates to provide appropriate analyses. Of course, with each new survey, the response rate cutoffs change, so we include different schools in the analytic sample of the survey from survey to survey. To allow for changes over time, we then go back and subset the original survey data sets into those schools that meet the response rate cutoffs for the latest survey year. Thus, in 1999 of the 128 schools surveyed, only 119 met the response rate cutoff for all three survey years. In 2001, 119 schools of the 120 surveyed met the response rate cutoff. So while the number of schools remained the same from 1999 to 2001, the schools were slightly different."

3. ICPSR did not receive any code descriptions for variable COLL_ID. Consequently, individual colleges can not be identified by name with this variable.

4. The SAS missing value code (".") and the SPSS system missing value are represented as a blank in the ASCII (LRECL) version of the data.

5. The data contain two weight variables: stwgt_99 and weight99. These variables provide weightings based on the enrollment demographics in each surveyed school. Variable stwgt_99 used 1995 IPEDS data as its baseline whereas weight99 used 1999/2000 IPEDS data.

6. Variables sex-smokeyr, oth-selfever, and vol30 were computed from the raw responses to the questionnaire which are coded in variables A1-G20. The computed variables are documented by the SAS statements shown in Chapter 3.

7. Chapter 3 is missing documentation for two variables: smoke30

and smokeyr.

8. Chapter 4 does not include frequencies for variables STUDY_ID, stwgt_99, weight99 or SERIAL.
