ICPSR Processing Note

1. For reasons of confidentiality, variables COLL_ID, STUDY_ID, and SERIAL are restricted from general dissemination. To obtain these variables, researchers must agree to the terms and conditions of a Restricted Data Use Agreement in accordance with existing ICPSR servicing policies. The cases in the public-use file were rearranged in random order. COLL_ID and SERIAL were recoded to missing and STUDY_ID was recoded to each case's ordinal number in the public-use file.

2. The principal investigator's staff provided this note concerning the analytic samples of the Harvard School of Public Health College Alcohol Study:

"Each year of the national survey, we resurveyed the same schools that participated in the last survey. With each new survey, a few schools drop out of the survey, and of those that remain, we keep only those schools that have high enough response rates to provide appropriate analyses. Of course, with each new survey, the response rate cutoffs change, so we include different schools in the analytic sample of the survey from survey to survey. To allow for changes over time, we then go back and subset the original survey data sets into those schools that meet the response rate cutoffs for the latest survey year. Thus, in 1999 of the 128 schools surveyed, only 119 met the response rate cutoff for all three survey years. In 2001, 119 schools of the 120 surveyed met the response rate cutoff. So while the number of schools remained the same from 1999 to 2001, the schools were slightly different."

3. ICPSR did not receive any code descriptions for variable COLL_ID. Consequently, individual colleges can not be identified by name with this variable.

4. The SAS missing value code (".") and the SPSS system missing value are represented as a blank in the ASCII (LRECL) version of the data.

5. The data contain a weight variable: stwgt_93. This variable provides weightings based on the enrollment demographics in each surveyed school.

6. Variables sex-e1_m34, oth-selfever, vol30, and NEWC19_A-NEWC19_D were computed from the raw responses to the questionnaire which are coded in variables A1-G15. The computed variables were generated by the SAS statements shown in Chapter 3.

7. Chapter 3 is missing documentation for nine variables: drive, anydrug1, anydrug2, e1_m34, nativam, and NEWC19_A-NEWC19_D.

8. The value labels assigned to variable A1 are incorrect. Variable A1 is coded 15-26 as shown in the questionnaire.

9. Chapter 4 does not include frequencies for variables STUDY_ID, stwgt_93, or SERIAL.

Chapter 2. Questionnaire

College Alcohol Study

Harvard School of Public Health

- Please complete the questionnaire as soon as possible, and return it in the postage-paid return envelope provided.
- Return the enclosed postcard separately. This lets us take your name off the follow-up list.
- Indicate your answers by filling in the circles.

YOU MUST USE A NO. 2 PENCIL

- Your answers are anonymous. Do not write your name on the questionnaire.
- Your participation is, of course, voluntary. You do not need to answer any question which makes you feel uncomfortable.

Thank you for your help. We do hope you will take part and let your views be represented.

*Please return this
questionnaire in the
postage-paid envelope
as soon as possible
or mail it to:*
